ABSTRAK

Cakupan pemberian imunisasi dasar lengkap pada bayi di Indonesia maupun di wilayah kerja Puskesmas Cibalong Kabupaten Tasikmalaya belum mencapai target yang ditetapkan. Kondisi tersebut menunjukkan perlunya perhatian terhadap kepatuhan ibu dalam memenuhi jadwal imunisasi bayi. Dukungan keluarga menjadi salah satu faktor yang dapat berperan dalam mendorong ibu memenuhi kebutuhan imunisasi anak secara tepat waktu.

Penelitian ini dilakukan untuk menganalisis keterkaitan dukungan keluarga dengan kepatuhan pemberian imunisasi dasar lengkap pada bayi di Wilayah Kerja Puskesmas Cibalong Kabupaten Tasikmalaya Tahun 2026.

Pendekatan kuantitatif dengan rancangan analitik *korelasional* dan desain *cross sectional* digunakan dalam penelitian ini. Sebanyak 68 responden dipilih sebagai sampel melalui teknik purposive sampling.

Sebanyak 34 responden (50,0%) berada pada kategori dukungan keluarga baik, sedangkan kepatuhan imunisasi dasar lengkap bayi mencapai 76,5% atau 52 bayi. Analisis menggunakan Chi-Square menghasilkan p-value sebesar 0,000 ($<0,05$), sehingga terdapat hubungan yang signifikan antara dukungan keluarga dan kepatuhan imunisasi dasar lengkap bayi.

Pelayanan kesehatan diharapkan meningkatkan edukasi tentang pentingnya dukungan keluarga dan manfaat imunisasi, sedangkan keluarga diharapkan memberikan dukungan agar imunisasi bayi dilaksanakan secara lengkap dan tepat waktu.

Kata Kunci: Bayi, Dukungan Keluarga, Kepatuhan Imunisasi Dasar Lengkap.

**THE RELATIONSHIP BETWEEN FAMILY SUPPORT AND COMPLIANCE
WITH COMPLETE BASIC IMMUNIZATION OF INFANTS IN THE
WORKING AREA OF CIBALONG PUBLIC HEALTH CENTER,
TASIKMALAYA REGENCY, 2026**

ABSTRACT

The coverage of complete basic immunization among infants in Indonesia and in the working area of Cibalong Public Health Center, Tasikmalaya Regency, has not yet reached the established target. This condition indicates the need for greater attention to mothers' compliance with the recommended infant immunization schedule. Family support is one of the factors that may play an important role in encouraging mothers to fulfill their children's immunization needs in a timely manner.

This study aimed to analyze the relationship between family support and compliance with complete basic immunization among infants in the working area of Cibalong Public Health Center, Tasikmalaya Regency, in 2026.

A quantitative approach with a correlational analytic design and a cross-sectional study design was employed. A total of 68 respondents were selected as the sample using purposive sampling.

A total of 34 respondents (50.0%) had good family support, while 76.5% of infants, or 52 infants, were compliant with complete basic immunization. Chi-Square analysis yielded a p-value of 0.000 (<0.05), indicating a significant relationship between family support and compliance with complete basic immunization among infants.

Health services are expected to strengthen education regarding the importance of family support and the benefits of complete basic immunization, while families are encouraged to provide support to ensure that infants receive complete and timely immunization according to the recommended schedule.

Keywords: Complete Basic Immunization Compliance, Family Support, Infants.
