The screenshot shows the PubMed website interface. The search bar contains the text "(chest physiotherapy)". Below the search bar, there are buttons for "Save", "Email", and "Send to". The search results section displays "5,090 results" and "Page 1 of 509". The first result is titled "Chest physiotherapy for pneumonia in adults." by Chen X, Jiang J, Wang R, Fu H, Lu J, Yang M. It is a Cochrane Database Syst Rev article from 2022. The abstract states: "BACKGROUND: Despite conflicting evidence, chest physiotherapy has been widely used as an adjunctive treatment for adults with pneumonia. ...Conventional chest physiotherapy (versus no physiotherapy) may have little to no effect on improving cure ...". A bar chart on the left shows the number of results by year, with a significant increase starting around 2018 and peaking in 2024.

The screenshot shows two browser windows. The left window is ScienceDirect, displaying search results for "clearance airway AND pneumonia". It shows "15,881 results" and a list of articles, including "Chapter 8: Airway clearance" and "Airway clearance in patients with neuromuscular disease". The right window is Google Cendekia, showing search results for "fisioterapi dada". It lists several articles, including "Pengaruh Fisioterapi Dada Terhadap Keefektifan Bersihan Jalan Nafas Pada Pasien Bronkitis Akut" and "Pengaruh Fisioterapi Dada, Teknik Efektif dan Nebulizer terhadap Peningkatan Saturasi Oksigen dalam Darah pada Pasien PPOK".
