**ABSTRAK**

Kehamilan memerlukan pelayanan antenatal yang komprehensif, termasuk pemeriksaan Triple Eliminasi untuk mendeteksi HIV, sifilis, dan hepatitis B guna mencegah penularan dari ibu ke bayi, namun cakupan pemeriksaan di Indonesia masih belum optimal. Di wilayah kerja UPTD Puskesmas Cibalong masih terdapat ibu hamil yang belum melakukan pemeriksaan Triple Eliminasi dan sebagian belum memahami manfaatnya, sehingga perlu diteliti hubungan antara pengetahuan ibu hamil dengan kepatuhan pemeriksaan Triple Eliminasi.

Penelitian ini bertujuan untuk mengetahui hubungan pengetahuan ibu hamil dengan kepatuhan pemeriksaan *triple eliminasi* di Wilayah Kerja UPTD Puskesmas Cibalong Tahun 2026.

Penelitian ini menggunakan penelitian kuantitatif dengan desain *analitik korelational* pendekatan *cross sectional*. Teknik pengambilan sampel menggunakan *Purposive Sampling* sehingga jumlah sampel sebanyak 41 responden.

Hasil penelitian menunjukkan bahwa sebagian besar ibu hamil di Wilayah Kerja UPTD Puskesmas Cibalong Tahun 2026 memiliki tingkat pengetahuan tentang pemeriksaan triple eliminasi dalam kategori baik (41,5%) dan berada dalam kategori patuh terhadap pemeriksaan *triple eliminasi* (56,1%). Hasil uji Chi-Square menunjukkan terdapat hubungan signifikan antara pengetahuan ibu hamil dengan kepatuhan pemeriksaan triple eliminasi di Wilayah Kerja UPTD Puskesmas Cibalong Tahun 2026 ( $p\text{-value} = 0,000 < 0,05$ ).

Saran bagi pelayanan kesehatan diharapkan dapat meningkatkan edukasi dan konseling mengenai pentingnya pemeriksaan triple eliminasi selama kehamilan untuk meningkatkan pengetahuan dan kepatuhan ibu hamil. Ibu hamil juga diharapkan lebih aktif mencari informasi kesehatan serta melakukan pemeriksaan triple eliminasi sesuai anjuran tenaga kesehatan guna mendukung deteksi dini dan pencegahan penularan HIV, sifilis, dan hepatitis B dari ibu ke bayi.

**Kata Kunci: Pengetahuan Ibu Hamil, Kepatuhan, Triple Eliminasi.**

**THE RELATIONSHIP BETWEEN PREGNANT WOMEN'S KNOWLEDGE  
AND COMPLIANCE WITH TRIPLE ELIMINATION SCREENING IN  
THE WORKING AREA OF UPTD CIBALONG COMMUNITY  
HEALTH CENTER IN 2026**

**ABSTRACT**

*Pregnancy requires comprehensive antenatal care, including Triple Elimination screening to detect HIV, syphilis, and hepatitis B in order to prevent mother-to-child transmission. However, the coverage of this screening in Indonesia remains suboptimal. In the working area of UPTD Cibalong Community Health Center, there are still pregnant women who have not undergone Triple Elimination screening, and some of them do not fully understand its benefits. Therefore, it is important to investigate the relationship between pregnant women's knowledge and their compliance with Triple Elimination screening.*

*This study aimed to determine the relationship between pregnant women's knowledge and compliance with Triple Elimination screening in the working area of UPTD Cibalong Community Health Center in 2026.*

*This study employed a quantitative research method with a correlational analytic design using a cross-sectional approach. The sampling technique used was purposive sampling, resulting in a total sample of 41 respondents.*

*The results showed that most pregnant women in the working area of UPTD Cibalong Community Health Center in 2026 had a good level of knowledge regarding Triple Elimination screening (41.5%) and were compliant with Triple Elimination screening (56.1%). The Chi-Square test results indicated a significant relationship between pregnant women's knowledge and compliance with Triple Elimination screening in the working area of UPTD Cibalong Community Health Center in 2026 ( $p\text{-value} = 0.000 < 0.05$ ).*

*It is recommended that healthcare services enhance education and counseling regarding the importance of Triple Elimination screening during pregnancy to improve pregnant women's knowledge and compliance. Pregnant women are also encouraged to actively seek health information and undergo Triple Elimination screening according to healthcare providers' recommendations to support early detection and prevent the transmission of HIV, syphilis, and hepatitis B from mother to child.*
