

ABSTRAK

HUBUNGAN PENGETAHUAN PERAWAT TENTANG TRIAGE DENGAN PELAKSANAAN TRIASE DI IGD RSUD dr. SLAMET GARUT TAHUN 2023

NAMA : ANDINAR RISNANDI

NIM : 1420122109

Latar belakang : Ruang instalasi gawat darurat (IGD) menjadi gambaran *crucial* dalam pelayanan pertama pada pasien di rumah sakit. Keakuratan triase sangat penting untuk mengurangi hasil klinis yang buruk, seperti diagnosis dan waktu perawatan pasien yang lama, penggunaan sumber daya rumah sakit seperti tenaga perawat yang tidak tepat, penurunan kepuasan pasien dan karyawan, serta terjadi peningkatan angka kematian di UGD. **Metode penelitian:** penelitian Kuantitatif. **Jenis penelitian :** Observasional Analitik dengan menggunakan pendekatan waktu *cross sectional*. **Sampel :** 59 perawat IGD di RSUD dr Slamet Garut. **Hasil penelitian :** Terdapat hubungan antara pengetahuan perawat terhadap pelaksanaan triage dengan hasil korelasi yaitu 0,444** dengan nilai sig(2-tailed) 0,000. Hal ini menunjukkan bahwa ada hubungan antara pengetahuan perawat terhadap pelaksanaan triase. Diharapkan pihak rumah sakit khususnya perlu mempertahankan serta meningkatkan pengetahuan perawat dalam pelaksanaan pelayanan kegawatdaruratan untuk menjaga kualitas pelayanan secara tepat dan akurat.

Kata Kunci : Pengetahuan, Perawat, IGD, Triase

ABSTRACT

THE CORRELATION OF NURSES' KNOWLEDGE ABOUT TRIAGE AND THE ACCURACY OF TRIAGE IMPLEMENTATION IN THE EMERGENCY ROOM OF Dr. SLAMET GARUT HOSPITALI IN 2023

NAME : ANDINAR RISNANDI

SIN : 1420122109

Issue : The emergency room (IGD) is a crucial feature of the first service for patients in the hospital. Triage accuracy is very important to reduce poor clinical outcomes, such as long patient diagnosis and treatment times, inappropriate use of hospital resources such as nursing staff, decreased patient and employee satisfaction, and increased mortality rates in the ER. **Research method** : Quantitative research. **Type of research** : Observational Analytical using a cross sectional time approach. **Samples** : 59 emergency room nurses at Dr Slamet Garut Regional Hospital. **Results** : There is a relationship between nurses' knowledge of the implementation of triage and the correlation results are 0.444** with a sig (2-tailed) value of 0.000. This shows that there is a relationship between nurses' knowledge of the implementation of triage. It is hoped that hospitals in particular need to maintain and increase nurses' knowledge in implementing emergency services to maintain the quality of services appropriately and accurately.
